FOR IMMEDIATE RELEASE

Gort Metals Awarded Contract for Florence RV Storage Facility Development

Phoenix, AZ - May 29, 2026

Gort Metals, a leading provider of engineered steel shade structures and covered parking solutions throughout the Southwest, has been awarded a contract by Aloha Construction Group to design, engineer, fabricate, and install a large-scale RV storage canopy system at the Florence Storage Facility in Florence, Arizona.

The project will consist of the construction of 328 covered RV parking spaces utilizing Gort Metals' engineered I-beam offset full-cantilever carport system, providing durable, long-lasting protection for recreational vehicles while maximizing accessibility and space efficiency. Work on the project is scheduled to begin immediately.

The scope of the contract includes engineering, permit acquisition, material procurement, freight, excavation, caisson footing installation, structural steel erection, and required special inspections for footings and field welding. The completed structures will feature pre-finished 29-gauge baked enamel roofing and corrosion-resistant steel framing designed to withstand Arizona's demanding climate conditions.

"This award reflects the confidence that Aloha Construction Group has placed in our team and our ability to deliver complex structural projects with precision and reliability," said John Gort, President of Gort Metals. "As demand for RV storage continues to grow throughout Arizona, we're proud to provide infrastructure that enhances both property value and long-term asset protection."

The Florence Storage Facility project represents a substantial investment in the region's growing recreational vehicle market. With Arizona remaining one of the nation's most popular destinations for RV owners and seasonal travelers, covered storage solutions have become increasingly important for preserving vehicle longevity and reducing maintenance costs. Once completed, the facility will provide hundreds of RV owners with premium covered storage options in one of Arizona's fastest-growing regions.

The project further strengthens Gort Metals' position as a trusted partner for commercial developers, contractors, and property owners seeking engineered steel solutions for parking, storage, solar, and shade structure applications throughout the western United States.

About Gort Metals

Founded in 1983 and headquartered in Phoenix, Arizona, Gort Metals specializes in the design, engineering, fabrication, and installation of high-performance steel shade structures, covered parking systems, carports, solar support structures, and custom steel solutions. For more than four decades, Gort Metals has partnered with leading contractors, developers, municipalities, and commercial property owners to deliver durable, innovative structures engineered to perform in some of the country's most demanding environments. The company's commitment to quality, integrity, and customer service has made it a trusted name throughout the Southwest and beyond.
